

Managed Web Application Firewall

Safeguard critical web applications with expert WAF tuning, monitoring and management

Defend Against a Moving Target

Web application firewalls are a critical part of any organization's security program, protecting internet servers from malicious traffic while blocking system compromise attempts. As threat actors develop more sophisticated ways to penetrate perimeter defenses, web application firewalls continue to draw more attention as an entry point. Defending an organization's web presence is essential, but clients are challenged to ensure their investment in web application firewalls produces results, as new attack vectors emerge that bypass traditional network and host-based security technologies.

How Secureworks Helps

The Secureworks Web Application Firewall (WAF) solution provides clients with powerful intelligence that enhances investment in web application firewall technology. Our WAF solution combines machine intelligence, automated action and orchestration by The Secureworks Counter Threat Platform™ (CTP), 18-plus years of attack data, daily monitoring of more than 4,400 clients worldwide, and global threat visibility driven by The Secureworks Counter Threat Unit™ (CTU™) Research Team. Secureworks helps our clients see more, know more and do more. We staff our Security Operations Centers (SOCs) with an elite team of researchers, analysts, engineers, and consultants who provide clients with around-the-clock investigation of real threats, plus management of a client's web application firewall environment.

Client Benefits

- 24x7 real-security and monitoring of WAF environments in real time
- Inspection of all inbound/outbound application traffic and application tuning
- Expert personnel for configuration, tuning, maintenance and performance, including upgrades and patches
- Health monitoring, including status and performance trends
- Blocking of inappropriate or malicious application traffic
- Configuration and implementation
- On-demand security compliance and reporting

Tuning the Environment for Maximum Efficiency

An effective web application firewall solution hinges on tuning, to ensure the right traffic is allowed into your environment while keeping malicious or unwanted traffic out. Our expert web application firewall personnel work with clients to configure firewall policies and rules. The solution is tailored to each client’s environment, using continuous monitoring and reviewing of performance.

Our Client Portal gives clients full visibility into their security environment, helping to identify and determine risk and demonstrate compliance. The Client Portal allows clients to drill down into specific events, generate standard and custom reports, schedule reports in advance, and engage our SOCs through a powerful ticketing system. The Client Portal’s mobile app provides this information on the go.

Our WAF solution helps clients keep policies current, protects against the latest known vulnerabilities, and provides configuration reflective of industry best practices. The experience of our elite team, combined with deep intelligence of the ever-changing threat landscape and the power of technology, results in clients receiving the most value from their web application firewall investment without the cost and burden of trying to accomplish these items internally.

About Secureworks

Secureworks® (NASDAQ: SCWX) is a leading global cybersecurity company that keeps organizations safe in a digitally connected world. We combine visibility from thousands of clients, aggregate and analyze data from any source, anywhere, to prevent security breaches, detect malicious activity in real time, respond rapidly, and predict emerging threats. We offer our clients a cyber-defense that is Collectively Smarter. Exponentially Safer.™

Why It Matters

Robust global threat visibility:

Secureworks searches the dark corners of the internet, using hundreds of relationships and a staff of 70-plus security researchers to discover the latest threats and develop countermeasures to protect our clients. We harness the power of the Network Effect; our CTU Threat Intelligence combined with more than 2 billion threat indicators from monitoring our clients’ infrastructure constantly enriches our technology with the latest protective measures.

Balance between information security and availability:

Tight tuning of web application firewalls are important, to ensure malicious activity stays out while legitimate traffic reaches the server. Our elite team performs extensive analysis of web application traffic to configure the rules and policies needed to safeguard applications while allowing legitimate traffic.

Around-the-clock, expert coverage:

Secureworks employs security professionals with the experience and knowledge to help clients unleash the value of their web application firewall environment. Our WAF solution allows clients to shed the burden of acquiring additional headcount to secure in-house expertise. We staff our SOCs on a 24x7 basis, providing defense-in-concert that many organizations cannot provide with an in-house solution.
