

DATA SHEET

Security Maturity Assessment

Identify and prioritize areas of improvement across your security program to drive security maturity

Assess your current cybersecurity program maturity, define your target state and develop a customized plan of action with expert-led analysis and guidance based on an understanding of your unique business priorities, security expertise and knowledge of industry leading standards.

Driving Cybersecurity Program Maturity

As market pressures such as innovation, continuity and profitability increase the pace of doing business, they also increase the risk that business objectives and cyber risk tolerance will become misaligned. Too often this results in misapplied resources, lack of accountability and inadequate processes to manage the most likely risks. The security function is challenged to develop a target operating model that aligns with business goals and tolerance, and looks beyond technical security controls – considering the end-to-end cybersecurity program.

How Secureworks® Helps

The Security Maturity Assessment is an assessment of your organization's cybersecurity program and risk management practices across the security domains outlined in the NIST Cybersecurity Framework (NIST CSF). It is a consultant-led assessment, designed to evaluate current security maturity with a view of identifying areas of improvement across people, processes and technology, and providing risk-informed, prioritized actions to achieve your target maturity state.

Our consultants bring years of experience, backgrounds in business and security, and hold multiple industry-recognized certifications. Their experience is enhanced by collective knowledge gleaned from thousands of engagements, Secureworks' 20 years of security expertise, rigorous education on the latest best practice standards, as well as integrated Threat Intelligence.

Our Approach

The Secureworks approach is based on having an upfront understanding of your business objectives and high-level organizational priorities, followed by activities including:

Customer Benefits

- Gain expert advice for planning and improving your existing security program posture
- Make informed decisions for planning cybersecurity activities, risk management and targeted improvement
- Share security status, needs and strategy with stakeholders utilizing standardized, recognized framework

Solution Features

- Consultant-led assessment based on NIST CSF
- Upfront strategic workshop
- Data Collection Methods: Interviews, Reviews, Observations, Questionnaires
- Validation of policies, standards, guidelines, procedures, and other documentation against the NIST CSF

- **Scope Definition:** to help identify and set the context for related systems and assets, regulatory requirements and overall risk.
- **Current Profile Creation:** to help understand your current maturity, we evaluate your existing program against core NIST CSF categories and subcategories using a Capability Maturity Model (CMM).
- **Target Profile Definition:** to help articulate direction, we define your desired cybersecurity outcomes against NIST CSF and score on CMM scale.
- **Analysis & Roadmap Development:** to pragmatically address gaps, we compare current state to target state to develop a prioritized, risk-based and pragmatic action plan to achieve the Target Profile.
- **Communicate:** to give your stakeholders confidence and facilitate conversation, we deliver an executive level presentation and a comprehensive report.

Solution Features

- Creation of current and target profile and maturity scoring
- Risk-informed roadmap development
- Comprehensive report including Executive Summary, detailed findings, targeted improvement recommendations

Deliverables

The report provides an executive summary, as well as a detailed section covering methodology, findings, narratives and prioritized recommendations and opportunities for improvement. You will also receive a copy of your current and target profiles and scores.
